

RT line Promotional Thermometers

Thermometers were the first item to be used for promotional purposes. They are ideally suited because it sure to be given a prominent place. Each time your customer checks the temperature, he will see your name.

Liquid crystal thermometers work by reflecting light. The crystals turn with the changing temperature and reflect different colours. Read the brightest colour. If 2 numbers are equally bright, read the temperature in between. Liquid crystal thermometers are very durable, but must be kept away from direct sunshine.

Specifications:

Promotional Refrigerator Thermometer
